

# Helping Seniors Stay Independent at Home

## *MedReady*

- **177,000 emergency visits each year are due to medication errors.**
- **7,000 deaths annually are attributed to medication errors.**
- **1 out of 10 hospital admissions are the result of the incorrect use of medications.**

MedReady is a tool designed to aid persons who take medications on a scheduled basis. The Automated Medication Dispenser is designed to alert a person, by ringing an alarm at the time medications need to be taken. The unit is lockable preventing a person from inadvertently over-dosing or under-dosing. The unit has twenty-eight compartments to hold medications and can be programmed to deliver up to four doses a day. By opening the door to access the medication, the alarm is silenced.

**Gain more independence and feel better with the easy-to-use automated medication dispenser by MedReady!**

The dispenser can also be monitored in case you forget to take your medication. If you do forget, we will call you with a friendly reminder allowing you to stay on schedule.
